Leslie's new character Ryan Wilder will begin Batwoman Season 2 donning the same suit as Rose's Kate Kane before debuting her new threads in the third episode, according to a press release issued by The CW.

The changes to Batwoman's look include a new cowl featuring natural, curly hair with red streaks, red gauntlets over the forearms, and shorter boots and a redesign with new materials, featuring laser etching to create more visual depth and a stronger silhouette.

The redesigned suit was conceptualized by costume designer Maya Mani and created by Ocean Drive Leather, while overseen by series executive producer Caroline Dries.

I love the fact that Ryan is becoming her own Batwoman it's her style, her swag, and her moment!

Leslie said in a statement. It was an honor to be able to collaborate with Caroline and Maya. I felt it was important that viewers could tell by the silhouette that Batwoman was a Black girl. With the form-fitting suit and beautiful Afro, we definitely nailed it!

Reactions to Batwoman's new look were largely positive on social media, including one from Leslie's co-star Camrus Johnson. Based on the iconic DC Comics character and set in the same Arrowverse as The CW's The Arrow, The Flash, Supergirl, Legends of Tomorrow, Black Lightning and the upcoming Superman & Lois, Batwoman premiered in October 2019 with the out lesbian Rose playing the out lesbian Kane, a street fighter battling Gotham City's criminal resurgence. The TV version of Kane was based on Batwoman's 2006 reintroduction in the comics and made her the first gay lead character in a live-action superhero series.

After Rose announced she was leaving the show in 2020 a mutual decision reached by Rose, the series and network that the actress later attributed to lingering effects from back surgery the producers reaffirmed their commitment to casting another LGBTQ actress in the role.
