1. Introduction

1.1

Java is a high-level, class-based, object-oriented programming language that is designed to have as few implementation dependencies as possible.

Java is a platform-independent programming language. It is designed to be portable across different operating systems and hardware architectures. The Java Virtual Machine (JVM) is responsible for executing the code and managing the memory.

2. JavaScript

JavaScript is a high-level, interpreted programming language that is primarily used for web browser-based applications. It is a core technology of the World Wide Web, alongside HTML and CSS.

JavaScript is a dynamic, multi-paradigm programming language. It supports object-oriented programming, functional programming, and imperative programming. It is used for client-side and server-side web development.

JavaScript is a scripting language that is used to create interactive web pages. It is executed by the browser and is responsible for the dynamic behavior of the web page.

JavaScript is a high-level, interpreted programming language that is primarily used for web browser-based applications. It is a core technology of the World Wide Web, alongside HTML and CSS.

3. PHP

PHP is a high-level, server-side scripting language that is primarily used for web development. It is a general-purpose programming language and is used to create dynamic web pages.

PHP is a server-side scripting language that is used to create dynamic web pages. It is executed on the server and is responsible for the dynamic behavior of the web page.

4. Python

Python is a high-level, interpreted programming language that is primarily used for web development. It is a general-purpose programming language and is used to create dynamic web pages.

Python is a high-level, interpreted programming language that is primarily used for web development. It is a general-purpose programming language and is used to create dynamic web pages.

5. CSS

CSS is a style sheet language used for describing the presentation of a document written in HTML. It is a core technology of the World Wide Web, alongside HTML and JavaScript.

CSS is a style sheet language used for describing the presentation of a document written in HTML. It is a core technology of the World Wide Web, alongside HTML and JavaScript.
