1. Introduction

1.1

Java is a high-level, class-based, object-oriented programming language that is designed to have as few implementation dependencies as possible. It is a general-purpose computer programming language that is designed to be as simple as possible to use, yet powerful enough to provide the capabilities of many other modern languages.

Java is a high-level, class-based, object-oriented programming language that is designed to have as few implementation dependencies as possible. It is a general-purpose computer programming language that is designed to be as simple as possible to use, yet powerful enough to provide the capabilities of many other modern languages. Java is a high-level, class-based, object-oriented programming language that is designed to have as few implementation dependencies as possible.

2

JavaScript is a high-level, interpreted programming language that is primarily used for web browser client-side scripting. It is a high-level, interpreted programming language that is primarily used for web browser client-side scripting. JavaScript is a high-level, interpreted programming language that is primarily used for web browser client-side scripting.

JavaScript is a high-level, interpreted programming language that is primarily used for web browser client-side scripting. It is a high-level, interpreted programming language that is primarily used for web browser client-side scripting. JavaScript is a high-level, interpreted programming language that is primarily used for web browser client-side scripting.

JavaScript is a high-level, interpreted programming language that is primarily used for web browser client-side scripting. It is a high-level, interpreted programming language that is primarily used for web browser client-side scripting. JavaScript is a high-level, interpreted programming language that is primarily used for web browser client-side scripting.

JavaScript is a high-level, interpreted programming language that is primarily used for web browser client-side scripting. It is a high-level, interpreted programming language that is primarily used for web browser client-side scripting. JavaScript is a high-level, interpreted programming language that is primarily used for web browser client-side scripting.

3. PHP

PHP is a general-purpose scripting language that is especially suited to web development. It is a general-purpose scripting language that is especially suited to web development. PHP is a general-purpose scripting language that is especially suited to web development.

PHP is a general-purpose scripting language that is especially suited to web development. It is a general-purpose scripting language that is especially suited to web development. PHP is a general-purpose scripting language that is especially suited to web development.

4

Python is a high-level programming language that is designed to be easy to learn and use. It is a high-level programming language that is designed to be easy to learn and use. Python is a high-level programming language that is designed to be easy to learn and use.

Python is a high-level programming language that is designed to be easy to learn and use. It is a high-level programming language that is designed to be easy to learn and use. Python is a high-level programming language that is designed to be easy to learn and use.

5. CSS

CSS is a style sheet language used for describing the presentation of a document written in HTML. It is a style sheet language used for describing the presentation of a document written in HTML. CSS is a style sheet language used for describing the presentation of a document written in HTML.

CSS is a style sheet language used for describing the presentation of a document written in HTML. It is a style sheet language used for describing the presentation of a document written in HTML. CSS is a style sheet language used for describing the presentation of a document written in HTML.
