_____

Configuring modules for when an article is clicked in a category blog layout menu (Joomla 2.5) main_menu_module (linked to a menu that has a Home Page link,Adidas Running Shoes, and a Sport articles Blog Layout link) module1 module2 The module main_menu_module should be shown in all pages (which is OK).
module1 be ONLY in Blog Layout List of Sport category,Discount Vans Sk8-Hi Shoes, not when a single Sport article from that list was clicked.
module2 be ONLY in single Sport article from that list,Cheap Sneakers Sale, and NOT when the Blog Layout LIST was shown.
Is that possible at all using Joomla? Even if that is not,,Sneaker Store Online, no problem. I just want a link proving this fact.
